WRITING FOR AN ACADEMIC JOURNAL

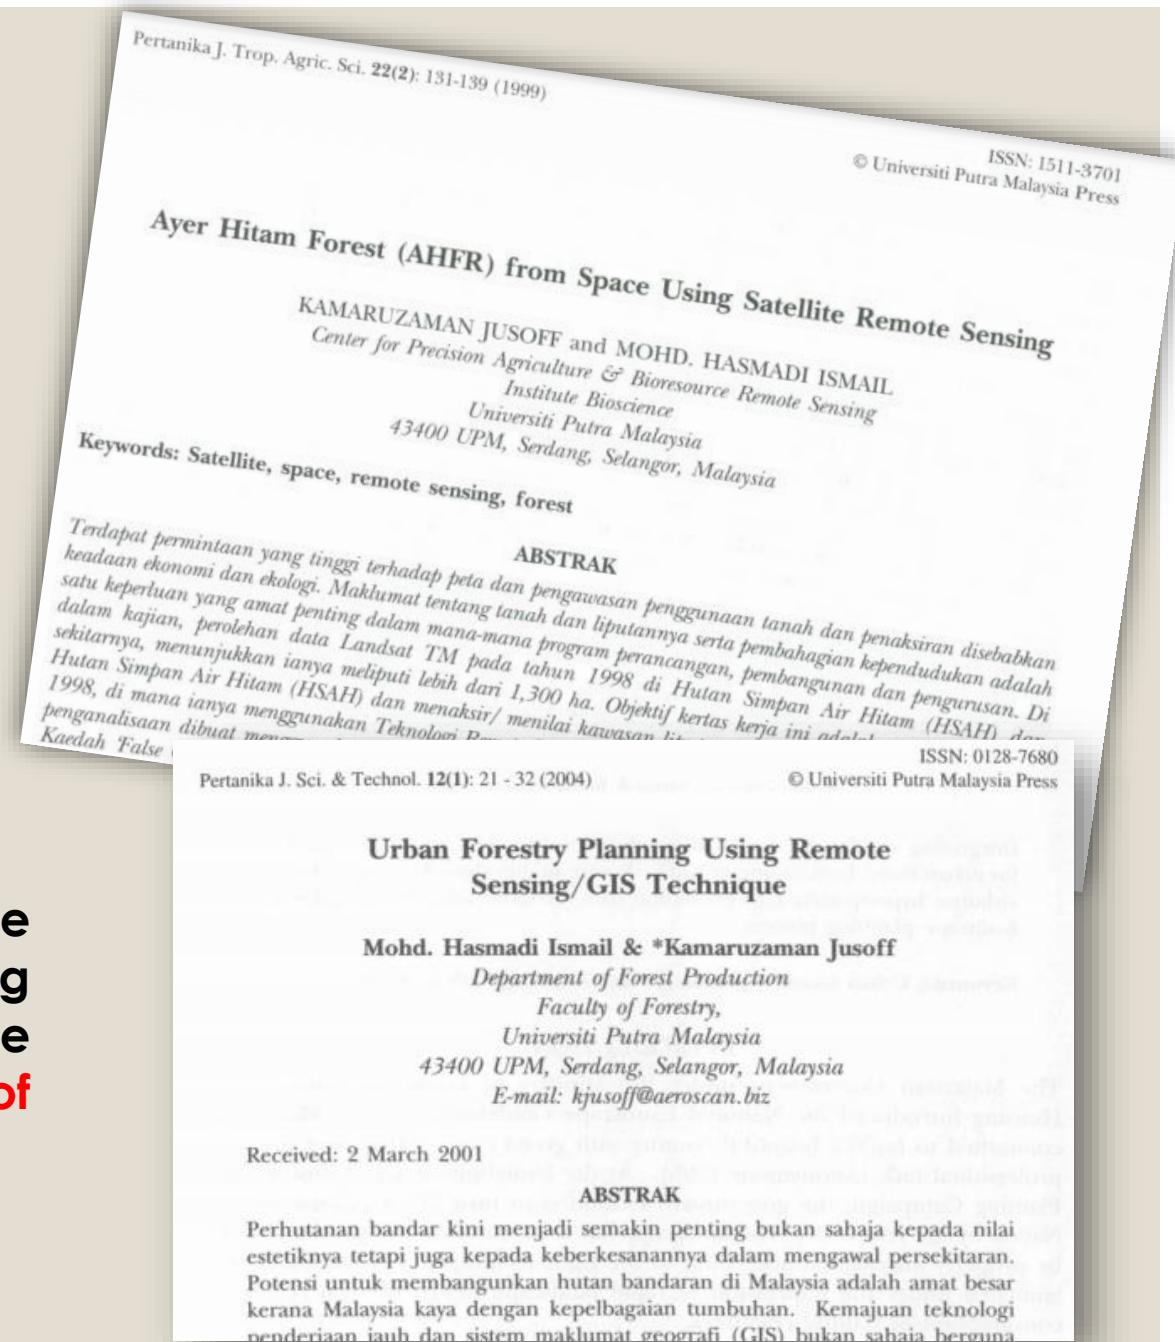

- Introduction
- myExperiences
- Journal metrics
- Where to publish?
- Tips on writing a journal article
- Challenges
- Conclusion

INTRODUCTION

Writing for publication allows you to **share your ideas, research findings and practice** with the wider community.

By publication, you are **helping to expand the body of professional knowledge**, and that is the responsibility of every researcher.

Publishing your work through visible sources **helps others to learn**. By adding your experiences to the literature of the field, it **helps to build the body of knowledge in your subject area**

Reasons to publish

1. BECOME A COVETED AUTHORITY

"Before I published my article, no one knew my name"

2. WE'LL BE CONTRIBUTING TO A BODY OF KNOWLEDGE

By publishing our work, **others can use the knowledge that you have generated and add to it with their scholarly work.** This scholarly cycle grows over time, serving as the bodies of literature that shape our field.

3. OUR WORK WILL BE CRITICALLY REVIEWED BY PEERS

A peer review is a process by which a scholarly work (such as a manuscript or curriculum) is **checked by a group of experts in the same field to make sure it meets the necessary standards** before it's accepted or published. The results of the **review can provide helpful feedback to improve our work.** Also, when accepted for publication, a peer review serves as one way to show your work is valued by the field.

4. WE BECOME WHAT WE DO

"Excellence is never an accident. It is always the result of high intention, sincere effort, and intelligent execution

5. WE WILL ADVANCE OUR CAREER

Youth are the ultimate beneficiaries of our academic work. However, we can benefit too. By achieving career goals like publishing and presenting our expertise, it shows that we possess creative intellectual work that is valued by the field and has been communicated to key audiences.

Others??

WRITING FOR AN ACADEMIC JOURNAL: myEXPERIENCES

Publish or perish?

If we screw up, it might be publishing and perish.

Poor articles, even a single one, can ruin a researcher's career.

“you only get one chance to make a **first impression**”.

Where to Publish Your Research?

Choosing the Right Journal

Criteria to Consider

Three questions to ask yourself when considering a journal:

- How does this journal **rank** in comparison to other journals?
- What are the **acceptance rates** of this journal?
- What is the **availability** of this journal?

Rank

Important to determine journal's **ranks** in comparison to other journals since this can directly affect **author impact**.

The higher the **ranking**, the more **influential** the journal.

Belows are tools that can help determine a journal's ranking.

•[Journal Citation Reports](#)

•[eigenFACTOR](#)

•[SCImago Journal and Country Rank](#)

Acceptance Rates

Journals with **lower acceptance rates** are generally considered **more prestigious**.

Below are tools that can help determine the acceptance rates of a journal.

•[APA Journal Statistics and Operations Data](#)

•[Association for the Advancement of Computing in Education](#)

•[Cabell's Whitelist and Blacklist Database](#)

•[MLA Directory of Periodicals](#)

Journal Availability

Cost and distribution can influence the availability of a journal.

•[Directory of Open Access Journals](#)

•[Ted Bergstrom's Journal Pricing Page](#)

Where to Publish Your Research?

Open Access and Author Fees

What is Open Access (OA)?

OA - is the practice of providing the public with unrestricted online access to scholarly journal article

Pros and Cons of Open Access

PROS

- **Free access=wider audience**; more people may read your work. You will also have free access to the work of others.
- Author often **retains copyright**, which is not usually the case in traditional publishing.
- OA is a **global initiative**, meaning that you will have exposure to culturally diverse opinions and practices.

CONS

- Some OA journals **charge an author fee** to publish. Fees vary greatly.
- **Predatory journals** charge authors large fees without providing proper editorial services.
- **Concerns** about quality control and authenticity of documents.

Author Fees

Some open access journals do charge authors a [fee to publish](#). This fee can range from hundreds to thousands of dollars, depending on the publisher.

Below are additional resources regarding author fees:

- [Comparison of BioMed Central's article-processing charges with those of other publishers](#)
- [eigenFACTOR's Cost Effectiveness for Open Access Journals](#)
- [PLOS Publication Fees](#)

RESEARCH ARTICLE

Evaluating the impacts of land use/land cover changes across topography against land surface temperature in Cameron Highlands

Darren How Jin Aik¹, Mohd Hasmadi Ismail^{1,2*}, Farrah Melissa Muharam^{2,3}, Mohamad Azani Alias¹

¹ Department of Forestry Science & Biodiversity, Faculty of Forestry and Environment, Universiti Putra Malaysia, Serdang, Selangor, Malaysia, ² Geospatial Information Science Research Centre, Faculty of Engineering, Universiti Putra Malaysia, Serdang, Selangor, Malaysia, ³ Department of Agriculture Technology, Faculty of Agriculture, Universiti Putra Malaysia, Serdang, Selangor, Malaysia

* mhasmadi@upm.edu.my

Abstract

The Cameron Highlands has experienced multiple land encroachment activities and repeated deforestation, leading to extensive land-use and land-cover change (LULCC) during the past six decades. This study aims to determine the LULCC against topography in Cameron Highlands between 2009 and 2019 by using geospatial techniques to analyze Landsat 7 (ETM+) and 8 (OLI/TIRS), ASTER GDEM and MODIS imaging sensors. The results showed a decline of 35.98 km² in primary forests over ten years across the Cameron

WRITING FOR AN ACADEMIC JOURNAL: TIPS

1) Have a strategy, make a plan

Why do you want to write for journals? What is your purpose? Are you writing for research assessment? Or to make a difference? Are you writing to have an impact factor or to have an impact?

Having a writing strategy: make sure you have both *external drivers* – such as scoring points in research project/assessment or climbing the promotion ladder – and *internal drivers* – which means working out why writing for academic journals matters to you.

This will help you maintain the motivation you'll need to write and publish over the long term. Since the time between submission and publication can be up to two years (though in some fields it's much less) you need to be clear about your motivation.

2) Analyse writing in journals in your field

Take a couple of journals in your field that you will target now or soon. Scan all the abstracts over the past few issues. Analyse them: look closely at all first and last sentences. The first sentence (usually) gives the rationale for the research, and the last asserts a *'contribution to knowledge'*.

Scan other sections of the articles:

How are they structured? What are the components of the argument? Highlight all the topic sentences – the first sentences of every paragraph – to show the stages in the argument. Can you see an emerging taxonomy of writing genres in this journal? Can you define the different types of paper, different structures and decide which one will work best in your paper?

3) Do an outline and just write

Which type of writer are you:

Do you always do an outline before you write, or do you just dive in and start writing? Or do you do a bit of both? Both outlining and just writing are useful, and it is therefore a good idea to use both.

However, make your outline very detailed: **outline the main sections and calibrate these with your target journal.**

When you sit down to write, what exactly are you doing: using writing to develop your ideas or writing to document your work? **Are you using your outline as an agenda for writing sections of your article?**

4) Get feedback from start to finish

- Even at the earliest stages, **discuss your idea for a paper with three or five people, get feedback on your draft abstract.** It will only take them a couple of minutes to read it and respond.
- **Do multiple revisions before you submit your article to the journal.**

5) Write with others

While most people see writing as a solitary activity, communal writing – writing with others who are writing – can help to develop confidence, fluency and focus. It can develop the discipline of regular writing. **Doing an academic writing in groups or at writing retreats.**

At some point – ideally at regular intervals – you can get a lot more done if you just focus on writing. If this seems like common sense, it isn't common practice. **Most people do several things at once, but this won't always work for regular journal article writing.**

*"If people cannot write well,
they cannot think well,
and if they cannot think well,
others will do their thinking
for them."
- George Orwell*

6) Do a warm up before you write

- While you are deciding what you want to write about, an initial warm up that works is to write for five minutes.

- Use a variation on this question as a warm up – what writing for this project have you done, and what do you want to do in the long, medium and short term? **Top tip:** end each session of writing with a 'writing instruction' for yourself to use in your next session, for example, 'on Monday from 8 am to 9 am, I will draft the conclusion section in 400 words'.

- As discussed, if there are no numbers, there are no goals. Goals that work need to be specific, and you need to monitor the extent to which you achieve them. This is how you learn to **set realistic targets**.

Tip: Write a table of contents for your article as early as possible. Expect to update and revise your table of contents as you write your piece and develop your argument.

7) Analyse reviewers' feedback on your submission

- **What exactly are they asking you to do?** Work out whether they want you to add or cut something. How much? Where? Write out a list of revision actions. When you resubmit, your article include this in your report to the journal, specifying how you have responded to the reviewers' feedback. **If your article was rejected, it is still useful to analyse feedback, work out why and revise it for somewhere else.**
- **Most feedback will help you improve your paper and, perhaps, your journal article writing,** but sometimes it may seem overheated, personalised or even hurtful. Some of it may even seem unprofessional. Discuss reviewers' feedback – see what others think of it. You may find that other people – **even eminent researchers – still get rejections and negative reviews**; any non-rejection is a cause for celebration. Revise and resubmit as soon as you can.

The NINE types of reviewers

Pedant

Be sure to include the counterion with every Pt Ruffos, Tens-HCL, Pipes-Na OH etc...

- ⊕ finds and corrects every single minor mistake in the manuscript. Great at policing errors.
- ⊖ Can't see the wood for the trees. Sometimes misses the big scientific findings altogether.

Stream-of-consciousness

I was ~~at~~ surprised at what the authors we're claiming here.

- ⊕ fast and impressionistic feedback.
- ⊖ unstructured and often liddled with typos.

Big thinker

The implications of this work are potentially transformative for the field.

- ⊕ sometimes finds significance that you didn't realise was there.
- ⊖ provides no technical or in-depth feedback whatsoever.

Hijacker

In order to properly demonstrate what the authors claim, they will need to...

- ⊕ understands the story.
- ⊖ tends to take the expertise and do all the experiments in your place.

Assassin

This needs ~~show more work~~.

- ⊕ quietly and efficiently kills your competitors papers.
- ⊖ quietly and efficiently kills your papers.

Sycophant

The data are of the quality that's always associated with this group.

- ⊕ generates, possibly over-generous feedback.
- ⊖ may feel you owe them something.

Last-minute

I only have a few points to raise.

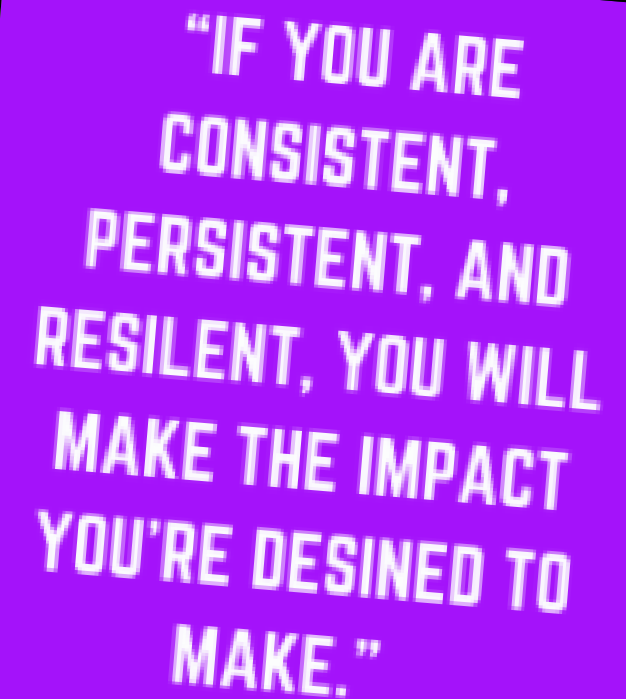

Unicorn

I have a few suggestions that the authors may wish to implement.

8) Be persistent, thick-skinned and resilient

- There are qualities that we may develop over time – or we may already have them.
- It may be easier to develop them in discussion with others who are writing for journals.

**“IF YOU ARE
CONSISTENT,
PERSISTENT, AND
RESILIENT, YOU WILL
MAKE THE IMPACT
YOU’RE DESINED TO
MAKE.”**

9. Clarity is key

- Make your writing accessible by using **clear language**. Writing that is easy to read, is **easier to understand too**.
- Go back to **thinking about your readers**; are they experts in your field who will easily follow technical language, or are they a lay audience who need the ideas presenting in a simpler way?

**SIMPLICITY IS THE KEY TO
BEAUTY. CLARITY IS THE
KEY TO PERFECTION.**

10. Don't be afraid to explain

- **Write** your journal article **with confidence**, to give your reader certainty in your research.
- Make sure that you've **described your methodology and approach**; whilst it may seem obvious to you, it may not to your reader. And **don't forget to explain acronyms** when they first appear

11. Be original

- Make sure to **connect your unique point of view to stand out**. You may be building on a concept already in existence, but you still need to have something new to say.

- **Make sure you say it convincingly, and fully understand** and reference what has gone before.

12) Take care of yourself

- Writing for academic journals is highly competitive. It can be extremely stressful.
- Even making time to write can be stressful, and there are health risks in sitting for long periods, so try not to sit writing for more than an hour at a time.
- Finally, be sure to celebrate thoroughly when your article is accepted. Remind yourself that writing for academic journals is what you want to do – that your writing will make a difference in some way.

Challenges!

- 1- Choosing the Suitable Journal
- 2- Language and Style
3. Contribution, novelty, similarities and plagiarism
4. Escalating Costs: compromise on quality?
5. Innovative work with well organized presentation
6. Piracy as a problem.
7. Extreme competition

Conclusion

Scientific/academic journals are still the most important media

Writing for academic journals is hard work for everyone. Unfortunately, there is no easy way to do so.

Set out the necessity and nature of theory, themes and narrative in the article.

Starting at the beginning with an introduction to your idea and related concepts and things

Thank you for attending!
